Important Notices & Disclaimer

This presentation (the "Presentation") is not a prospectus and it shall not constitute an offer to sell or the solicitation of an offer to buy, nor shall there be any sale of, the securities in any state or jurisdiction in which such an offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of such state or jurisdiction. BioAtla, Inc. ("we", "us", "our", "BioAtla", or the "Company") has filed a registration statement (File No. 333-250093), which includes a preliminary prospectus, with the Securities and Exchange Commission ("SEC") for the offering to which this Presentation relates. The registration statement has not yet become effective. Our securities may not be sold, nor may offers to buy be accepted, prior to the time the registration statement becomes effective. Before you invest in any such securities, you should read the preliminary prospectus in that registration statement and other documents we have filed with the SEC for more complete information about us and this offering. You may obtain these documents for free by visiting EDGAR on the SEC website at www.sec.gov. Alternatively, copies of the preliminary prospectus may be obtained from J.P. Morgan Securities LLC, c/o Broadridge Financial Solutions, 1155 Long Island Avenue, Edgewood, New York 11717, Attention: Prospectus Department or by calling (866) 803-9204; Jefferies LLC, Attention: Equity Syndicate Prospectus Department, 520 Madison Avenue, 2nd Floor, New York, NY 10022, or by telephone at 877-547-6340 or by email at Prospectus_Department@Jefferies.com; or Credit Suisse Securities (USA) LLC (Attention: Prospectus Department, 6933 Louis Stephens Drive, Morrisville, NC 27560, or by telephone at (800) 221-1037, or by email at usa.prospectus@credit-suisse.com). The Presentation does not purport to be a prospectus, to be complete or to contain all of the information you may desire.

This Presentation contains "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 relating to our business, operations and financial conditions, including but not limited to current beliefs, expectations and assumptions regarding the future of our business, future plans and strategies, results of clinical trials and other future conditions. Words such as, but not limited to, "anticipate", "believe", "could", "estimate", "expect", "intend", "may", "plan", "potential", "predict", "project", "should", "will", "would" or the negative of those terms, and similar expressions that convey uncertainty of future events or outcomes, identify forward-looking statements.

These forward-looking statements reflect management's beliefs and views with respect to future events and are based on estimates and assumptions as of the date of this Presentation and are subject to risks and uncertainties. Moreover, the Company operates in a very competitive and rapidly changing environment. New risks emerge from time to time. It is not possible for management to predict all risks, nor can the Company assess the impact of all factors on its business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements we may make. Given these uncertainties, you should not place undue reliance on these forward-looking statements. The Company qualifies all of the forward looking statements in this Presentation by these cautionary statements. Except as required by law, the Company undertakes no obligation to publicly update any forward-looking statements, whether as a result of new information, future events or otherwise.

Statements contained herein are made as of the date of this Presentation unless stated otherwise, and neither this Presentation, nor any sale of securities, shall under any circumstances create an implication that the information contained herein is correct as of any time after such date or that the information will be updated or revisited to reflect information that subsequently becomes available or changes occurring after that date hereof.

Certain information contained in this Presentation relates to or is based statistical and other industry and market data obtained from independent industry publications and research, surveys and studies conducted by independent third parties as well as the Company's own estimates of the prevalence of certain diseases and conditions. The market data used in this Presentation involves a number of assumptions and limitations, and you are cautioned not to give undue weight to such data. Industry publications and third-party research, surveys and studies generally indicate that their information has been obtained from sources believed to be reliable, although they do not guarantee the accuracy or completeness of such information. The Company's estimates of the patient population with the potential to benefit from treatment with any product candidates the Company may develop include several key assumptions based on its industry knowledge, industry publications and third-party research, which may be based on a small sample size and may fail to accurately reflect the addressable patient population. While the Company believes that its internal assumptions are reasonable, no independent source has verified such assumptions.

This Presentation contains trademarks, trade names, or service marks belonging to other entities. The Company does not intend the use or display of other parties' trade names, trademarks or service marks to imply a relationship with, or endorsement or sponsorship of, or by these other parties.

BioAtla at a Glance

The Company

Technology

- Proprietary CAB technology creates antibodies that conditionally and reversibly bind to tumors, but not normal cells, enabling increased antibody potency and reduced toxicity
- Strong intellectual property rights- Over 500 patents (270 issued, 12 allowed, and 249 pending)

Clinical and Team

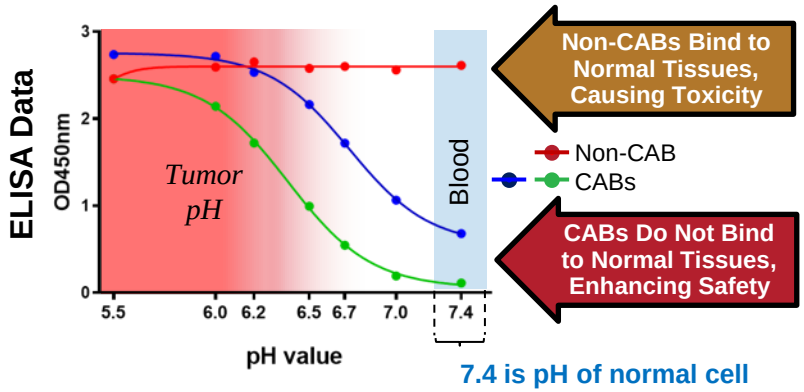
- Clinical stage company with two first-in-class P2 CAB antibodies for multiple indications and one partnered CAB antibody entering P1 clinical studies
- 62 employees and contractors with exceptional experience in innovative research and clinical development

Finance and Infrastructure

- Launched successful IPO on December 16th raising over $217 MM in gross proceeds with $383 million raised to date
- Committed BeiGene collaboration with $25 million received to date, and eligible to receive up to $225.5 million in future milestone payments
- Headquartered in San Diego in a ~43,000 square foot office and lab facility with a contract lab in Beijing

CABs* Bind Selectively and Reversibly Based on the TME, Enhancing Exposure and Reducing Toxicity

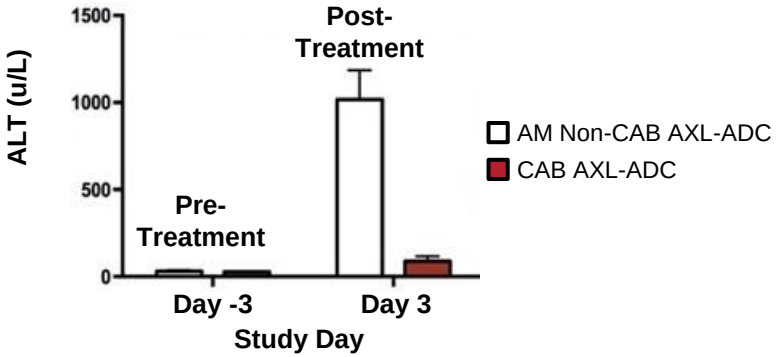
CABs Bind Selectively in the Lower pH TME



7.4 is pH of normal cell

Selective Binding → **Focused Tumor Killing** → **Normal Cells Preserved**

Reduced Toxicity in Non-human Primates



- CAB ADC resulted in minimal increase in ALT, supporting that on-target, off-tumor toxicity is reduced with the CAB ADC

CABs Widen Therapeutic Index

- **Eliminates or reduces off-tumor tox**
- **Avoid TMDD, improves pharmacokinetics (PK)**
- **Only CDR modification, reducing immunogenicity**
- **Efficient development and manufacturing**
- **Expands target universe**
- **Increased safety and potency**
- **Reversible via Protein-associated Chemical Switches (PaCS™) (responsive to H^+)**

Unlike prodrugs, CABs are reversible, enhancing the therapeutic index

Note: Data above based on non-human primate studies; OD450nm = optical density measurements using a microplate reader with a 450nm filter; TME = Tumor Microenvironment; AM = affinity matched; CDR = Complementarity-determining regions; TMDD = Tissue Mediated Drug Deposition; ALT or alanine aminotransferase elevation is a sign of liver toxicity

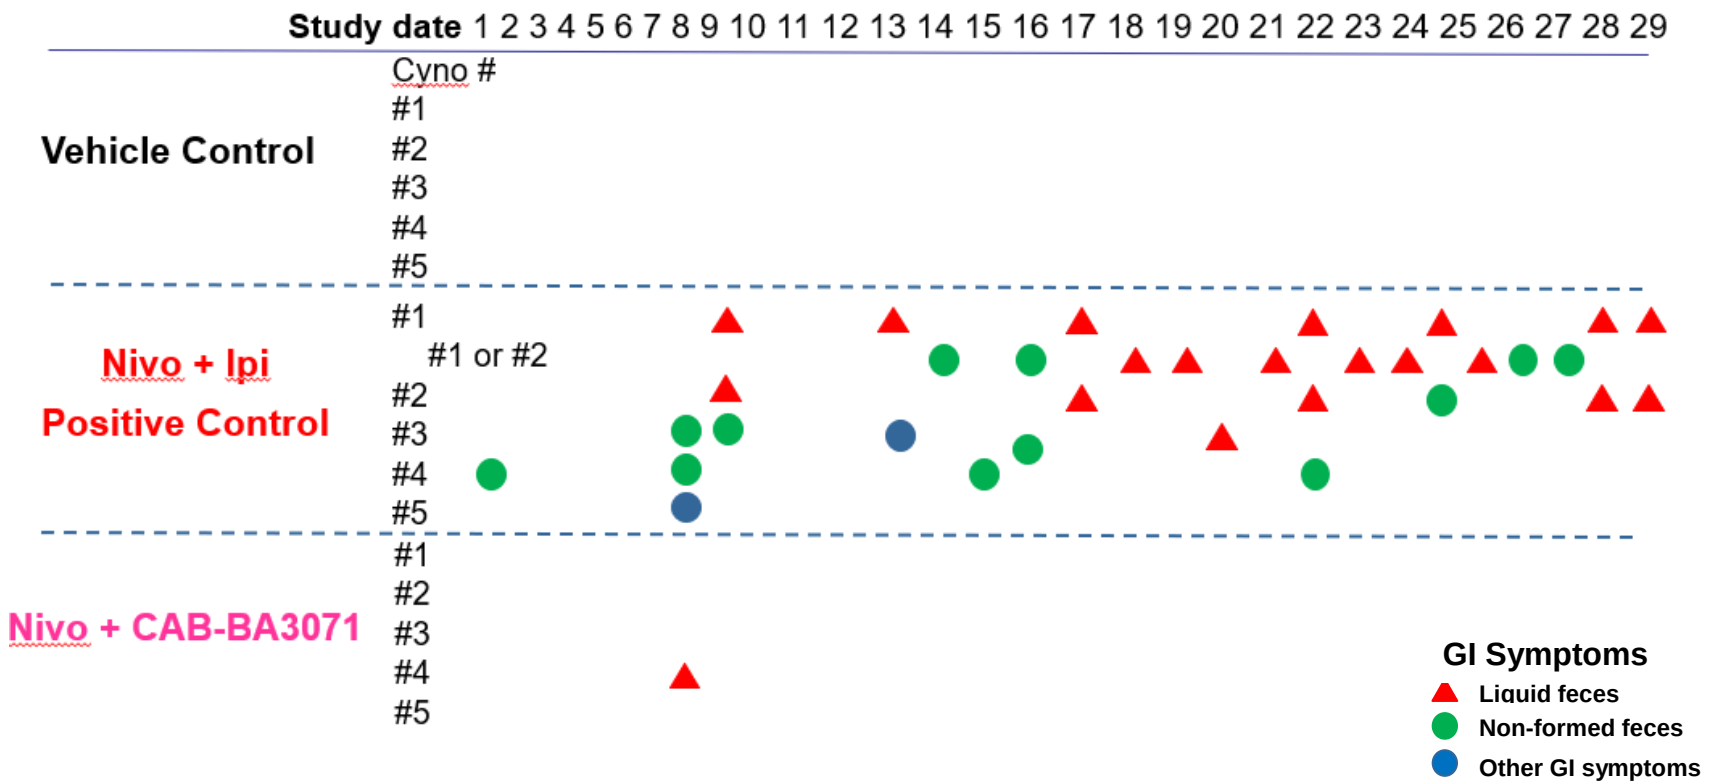
*Chang, H.W., Frey, G., Liu, H., Xing, C., Steinman, L. Boyle, W.J. & Short, J.M. (2021) PNAS 118(9): 1-10, Suppl 1-19.

Reduced Toxicity Observed In Non-Human Primate Study With CAB-CTLA4 in Combination With Nivolumab

Once weekly for four weeks exposure to Nivolumab + ipilimumab or CAB CTLA4

Nivolumab: 20mg/kg QW (12x human dose)

Ipilimumab or CAB-CTLA4: 15mg/kg QW (45-60x human dose)



Robust Pipeline of Antibody-Based Therapeutics

Type	CAB Program	Target	Indications	Discovery	IND Enabling	Phase 1	Phase 2	Phase 3	Expected Upcoming Milestones
ADC	BA3011 (AXL-ADC)	AXL Positive	STS & Bone Sarcoma, NSCLC, Ovarian Cancer* (Mono & Combo w/ PD-1)						• Ph2 interim data 2021 • Ph2 registration data 2022
	BA3021 (ROR2-ADC)	ROR2 Positive	NSCLC, Melanoma, Ovarian Cancer* (Mono & Combo w/ PD-1)						• Ph2 interim data 2021 • Ph2 registration data 2022
CTLA-4	BA3071 (CTLA-4)	CTLA-4	RCC, NSCLC, SCLC, HCC, Melanoma, Bladder, Gastric, Cervical Cancer (Mono & Combo w/ PD-1)			BeiGene			• Ph1 dose escalation trial to be initiated and potential Ph1 data in 2H 2021
Bispecific	BA3182 (Bispecific)	EpCAM / CD3	NSCLC, SCLC, Colorectal, Ovarian, TNBC, Prostate Cancer**						• US IND in 1H 2022
	BA3142 (Bispecific)	B7-H3 / CD3	NSCLC, SCLC, HNC, Melanoma, Sarcoma, Pancreatic, Prostate Cancer**						• US IND in 2H 2022
	EGFR (Bispecific)	EGFR / CD3	NSCLC, HNC, Pancreatic, TNBC, Colorectal Cancer**						• Potential US IND in 2H 2022
	Nectin-4 (Bispecific and/or ADC)	Nectin-4 / CD3	Bladder, TNBC, Pancreatic Cancer**						• Potential US IND in 2H 2022

Abbreviations: *STS = Soft Tissue Sarcoma, NSCLC = Non-small Cell Lung Cancer, RCC = Renal Cell Carcinoma, SCLC = Small Cell Lung Cancer, HCC = Hepatocellular Carcinoma, TNBC = Triple-Negative Breast Cancer, HNC = Head and Neck Cancer; * Ph2 investigator-initiated trial for Ovarian Cancer expected to be initiated by the end of 2020 or early 2021*

*** Anticipated indications based upon tumor target expression*

AXL: Well-Validated Target Among Multiple Indications

Disease Progression

1

AXL's higher expression associated with disease progression in several indications, including:

- Sarcoma*, NSCLC, ovarian cancer, breast cancer, pancreatic cancer, glioblastoma, melanoma, RCC, prostate cancer, and esophageal cancer

Tumor Resistance

2

AXL expression associated with tumor resistance to:

- Chemotherapy, PD-1/L1 inhibitors, molecular targeted therapy (EGFR), and radiation therapy

Clinical Validation

3

AXL has been clinically validated as a target:

- Multiple assets in the clinic including non-specific small molecules and antibody ADCs
- Some anti-AXL antibodies in the clinic have shown encouraging signs of antitumor activity; however, adverse events may limit clinical utility and/or potency

Initial US Addressable Patient Population

Tumor type	Patient treatment phase	Est. corresponding US patient population	Est. AXL positivity rate[1]	Est. US target population at launch
Sarcoma (STS* & Bone)	Stage III/IV	10,000 – 15,000	50%	**5,000 – 7,500**
NSCLC	Stage III/IV (PD-1/L1 experienced)	66,000[2]	30%	**15,000**
Ovarian Cancer	Stage III/IV Platinum resistant	12,000	30 – 40%	**4,000**

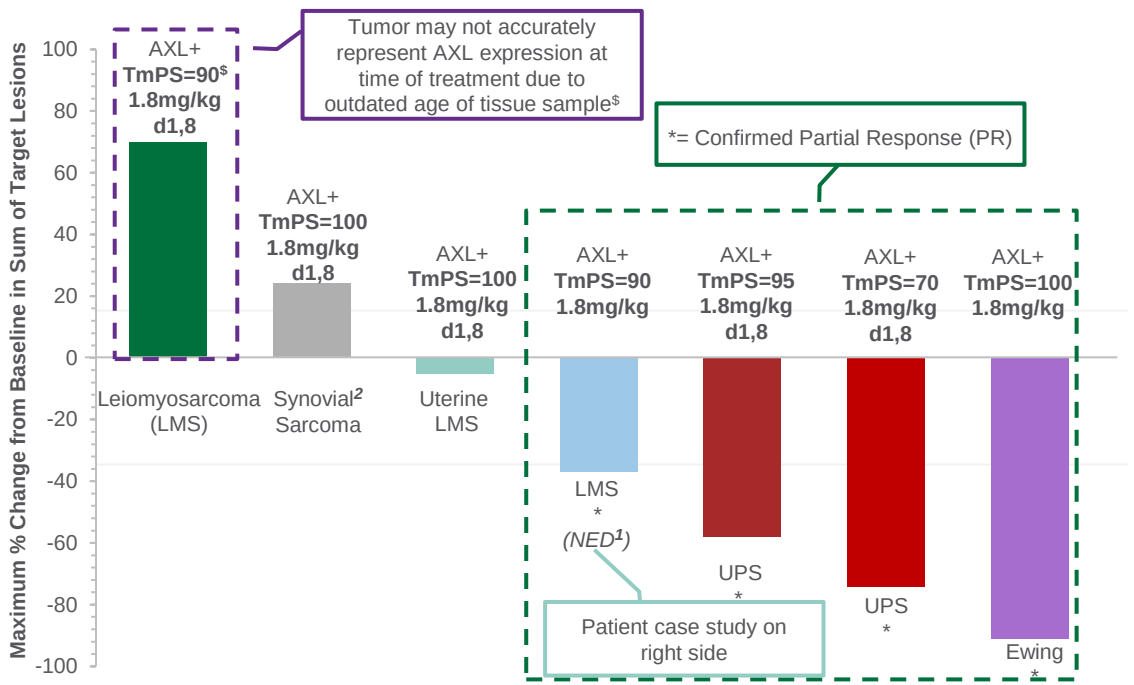
Source: BioAtla IHC assay validation results & phase 1 AXL testing data, GlobalData-Opportunity Analysis and Forecasts, SEER database

[1]Based on TmPS (Tumor membrane Percent Score) [2]75% of these patients generally switch to a new therapy

*** Orphan drug designation for BA3011 for treatment of soft tissue sarcoma was granted on March 1st, 2021 by the Office of Orphan Drug Products (OOPD) at FDA**

BA3011: Encouraging Results at 1.8mg/kg in AXL High (TmPS ≥70) Sarcoma* Patients

Sarcoma* (confirmed TmPS** ≥70; 1.8mg/kg Q3W or 2Q3W)



4 partial responses out of 7 refractory sarcoma patients with TmPS ≥70 at optimal dosing levels

Notes:

***Orphan drug designation for BA3011 for treatment of soft tissue sarcoma was granted on March 1st, 2021 by the Office of Orphan Drug Products (OOPD) at FDA**

**AXL Tumor membrane Percent Score or TmPS = % Score ≥1+

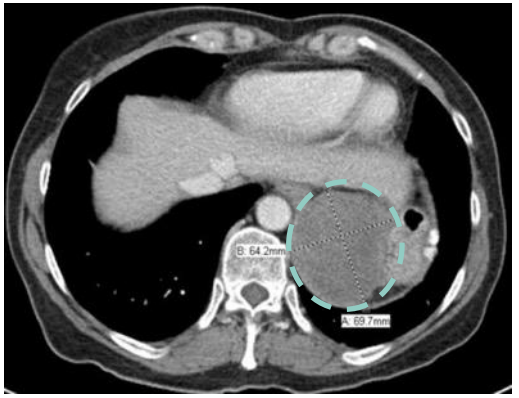
$Tissue biopsy from resection, over 1 year old prior to trial entry

All patients: Multiple cycles of antineoplastic agents received prior to starting treatment with BA3011

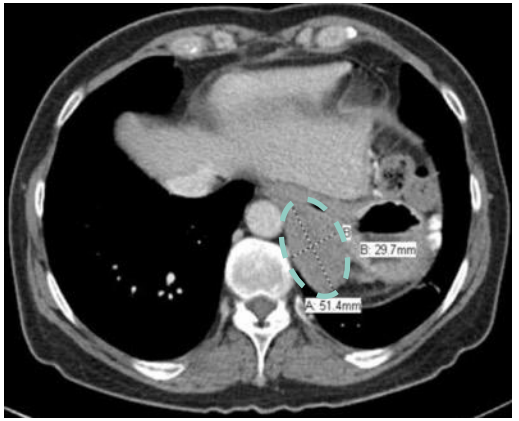
1 NED = No evidence of disease

2 Synovial sarcoma patient delayed treatment due to unrelated SAE led to progression

LMS Patient Case Study



Pre-treatment

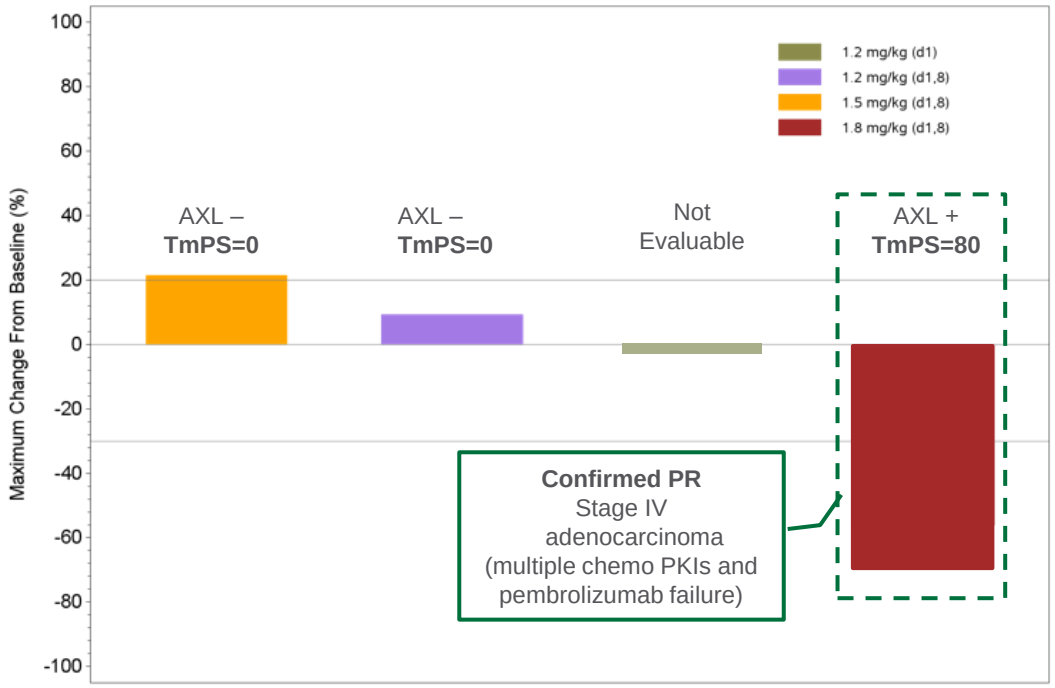


Post-treatment, week 18 Scan

- 37% tumor reduction
- Tumor mass reduced enough to enable successful surgical resection resulting in NED1

BA3011: Encouraging Results in NSCLC AXL High (TmPS ≥70) Patient at 1.8mg/kg

NSCLC (All Patients)



Stage IV adenocarcinoma patient case study

- Patient experienced multiple failures of prior treatments
- Prior treatment with PD-1 inhibitor (pembrolizumab) failed
- ~70% tumor reduction after BA3011 dosed at 1.8 mg/kg 2Q3W

Out of 4 NSCLC patients, partial response achieved in the one patient with TmPS ≥ 70

Note: All patients: Multiple cycles of antineoplastic agents received prior to starting treatment with BA3011

ROR2 Targeting: Significant Commercial Opportunity

ROR2 Over-expression

1

Over-expressed across many solid tumors, including NSCLC, melanoma, ovarian, TNBC, and HNC

Enhanced ROR2 Expression

2

Enhanced ROR2 expression with prior PD-1/L1 treatment

Nascent Competition

3

No other ROR2 ADC or small molecules in the clinic yet, but competition is emerging

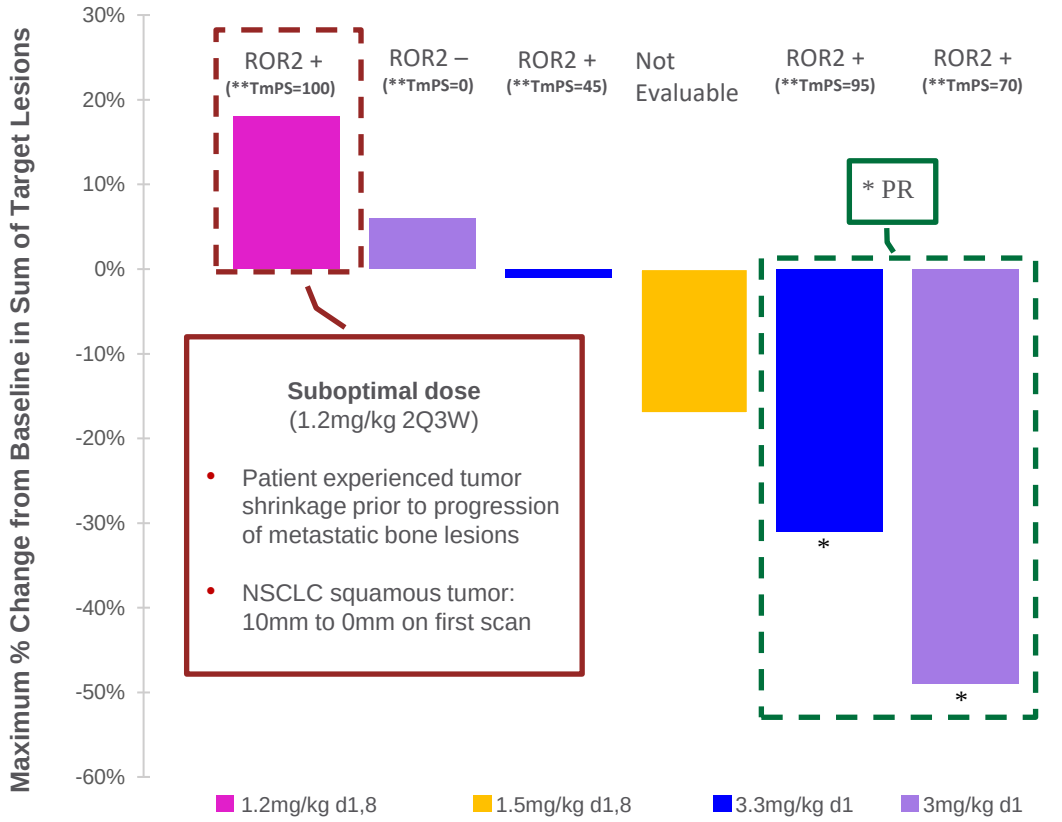
Initial US Addressable Patient Population

Tumor type	Patient treatment phase	Est. corresponding US patient population	Est. ROR2 positivity rate[1]	Est. US target population at launch
NSCLC	Stage III/IV (PD-1/L1 inhibitor)	66,000[2]	30%	**15,000**
Melanoma	Immune checkpoint inhibitor	25,000[2]	20 – 30%	**5,000**
Ovarian Cancer	Stage III/IV Platinum resistant	12,000	30 – 40%	**4,000**

Source: BioAtla IHC assay validation results & phase 1 AXL testing data, GlobalData-Opportunity Analysis and Forecasts, SEER database;
[1]Based on TmPS (Tumor membrane Percent Score) [2]75% of these patients generally switch to a new therapy

BA3021: Encouraging Results in Stage IV PD-1 Refractory NSCLC Patients

All evaluable NSCLC patients enrolled in BA3021 Phase 1 trial



Clinical results show promise in refractory patients

1. **All NSCLC patients who enrolled in this trial had previously been treated with PD-1 therapy**

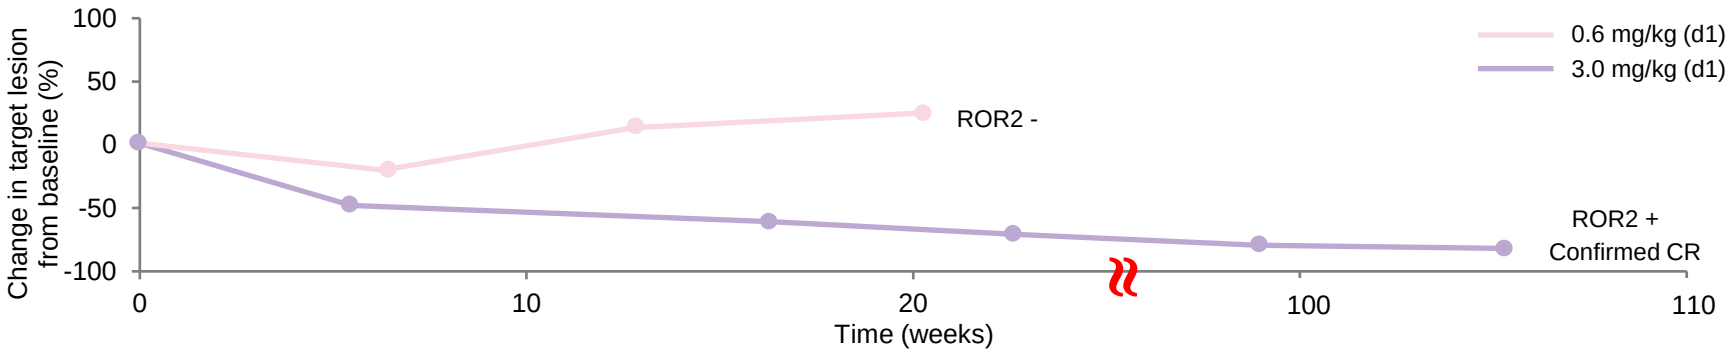
2. **ROR2 expression strongly correlates with anti-tumor response**

Note: Not Evaluable (Strong, extensive fibroblastic stromal positivity reported)

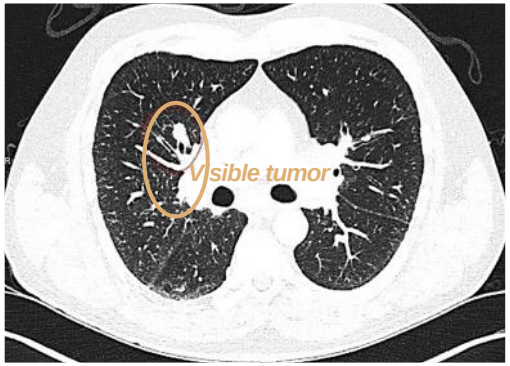
**TmPS= Tumor membrane Percent Score- Tumor membrane target expression calculated by summing the percentages of intensities at either ≥1+, ≥2+ or ≥3+. Scores range from 0 to 100.

BA3021: Encouraging Results in Stage IV PD-1 Refractory Melanoma and Head and Neck Cancer Patients

All evaluable metastatic melanoma patients enrolled in BA3021 Phase 1 trial by ROR2 TmPS

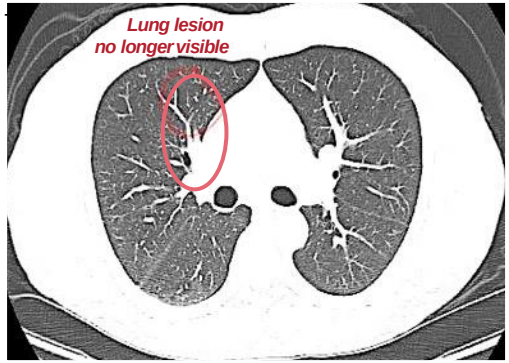


- One of two melanoma patients enrolled in the BA3021 Phase 1 dose escalation trial achieved a **Complete Response (CR; Purple line)**
- **Patient with CR** experienced failure of both nivolumab & nivolumab + ipilimumab; now continuing BA3021 ~ 2 yr, consistent with results below



Pre-treatment CT scan

Pre-treatment posterior occipital lymph node biopsy: **Active melanoma**



On-treatment; Week 6 Scan

On-treatment posterior occipital lymph node biopsy: **No melanoma detected**

"Biopsy: consistent with metastatic melanoma… consists of fibrous stroma and a relatively **pure population of malignant melanoma cells**…"

"Final pathology results: dense fibrous connective tissue with abundant melanin-laden macrophages, **no melanoma seen…**"

Head and neck squamous cell carcinoma (HNSCC): One PR (-54%) observed out of one HNSCC cancer patient treated; ROR2 positive; Refractory to 4 prior lines of therapy incl. cetuximab, pembrolizumab

CAB ADCs Well Tolerated at 1.8mg/kg Q3W, Q2W or 2Q3W

Overview of adverse events in Phase 1 trials

AEs consistent with MMAE-based toxicity, including:
- reversible myelosuppression
- transient liver enzyme elevation
- metabolic disturbances

Few related SAEs

Few related AEs leading to treatment discontinuation

BA3011-Patients administered 1.8mg/kg Q3W, Q2W, or 2Q3W (d1,8) (safety population Phase 1 & 2)

Characteristic	BA3011 (N=38)
Any Adverse Events (AEs)	38 (100%)
Related AEs with CTCAE[1] Grade 3 or 4[2]	15 (39%)
Any related serious AEs[2]	4 (11%)
Related AEs leading to death[2]	0
Related AEs leading to treatment discontinuation[2]	2 (5%)[§]

[§] Grade 2 fatigue and peripheral neuropathy at 1.8mg/kg 2Q3W

Similar safety profile observed for BA3021

BA3011 (CAB AXL-ADC) (all patients n=64)

No clinically meaningful on-target toxicity observed

Constipation

- Grade 1-2 **(26%)**
- Grade 3 **(3%)**

Constipation is believed to be an on-target mediated effect

Differentiated profile due to advantageous pharmacokinetic characteristics of CAB ADC

Peripheral Neuropathy & Diarrhea

- PN rates **(28%) (All Grade 1-2)**
- Diarrhea rates **(19% Grade 1-2; 3% grade 3-4)**

Note: [1]CTCAE: Common Terminology Criteria for Adverse Events. The NCI Common Terminology Criteria for Adverse Events is a descriptive terminology which is utilized for Adverse Event (AE) reporting. A grading (severity) scale is provided for each AE term. [2]As assessed by the investigator. Missing responses are counted as related.

Potentially Registration-Enabling Phase 2 Trials

CAB AXL-ADC (BA3011)

Sarcoma (STS# & Bone)
mono & combo with PD-1; AXL TmPS*≥50 ;
3rd Line (n=200-275)

Interim analysis

Data read-out

NSCLC
mono & combo with PD-1; AXL TmPS*≥50
in PD-1 refractory patients (n=40)

Proof Of Concept read-out

Ovarian Investigator-Initiated Trial (IIT) not shown

2020 | 2021 | 2022

CAB ROR2-ADC (BA3021)

NSCLC
mono & combination w PD-1
ROR2 TmPS*≥50 ; PD1-refractory patients (n=200)

Melanoma
mono & combination w PD-1
ROR2 TmPS*≥50 ; PD1-refractory patients (n=200)

Interim analysis

Data read-out

Ovarian Investigator-Initiated Trial (IIT) not shown

Note: # STS= Soft Tissue Sarcoma; *TmPS= Tumor membrane Percent Score- Scores range from 0 to 100

CAB CTLA-4 (BA-3071): Potential for Disruption of the I/O Market

Opportunity exists for a "safer" CTLA-4 inhibitor

- Traditional combination of anti-PD-1 and anti-CTLA-4 checkpoint inhibitor led to improved outcomes
- Combination associated with increase in adverse events and treatment discontinuations
- A safe combo of PD-1/CTLA-4 has potential across many immunogenic tumors

Clinical Endpoint	Nivolumab (PD-1)[1]	Nivolumab + Ipilimumab[1]
Progression Free Survival	6.9 months	11.5 months
Grade 3 or 4 Adverse Events	16.3%	**55.0%**
Discontinued Treatment	7.7%	**36.4%**

Source: [1]Larkin et al., New Eng. J. Med.,373: 23-34, 2015

BeiGene

Global Strategic Collaboration

- BeiGene holds an exclusive global license to BA3071
- BioAtla has received $25 million in upfront payments & reimbursement
- BioAtla eligible to receive up to $225.5 million for subsequent regulatory and development milestones
- BioAtla eligible to receive significant tiered royalties on worldwide sales

Clinical Development

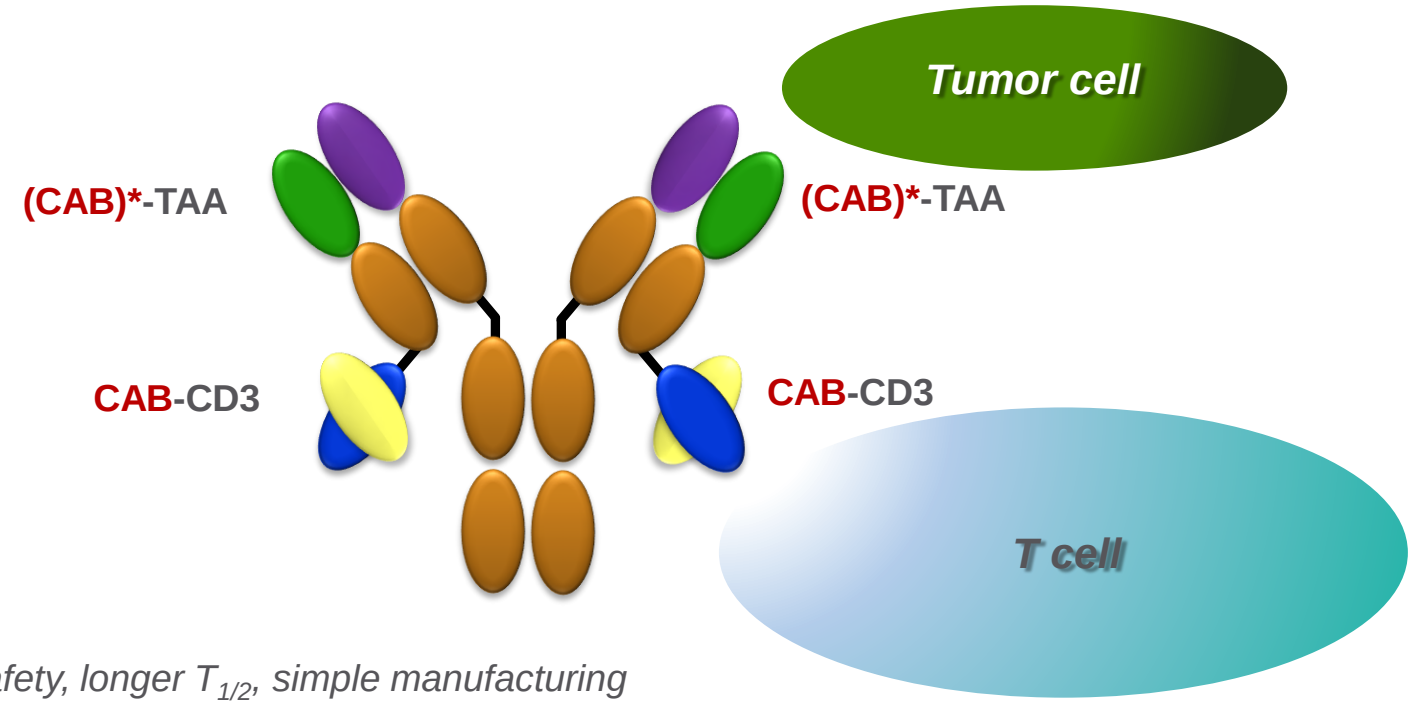
- Expected Phase 1 dose escalation trial in 2021
- Doses of 7mg Q3W to 700mg Q3W[1] as monotherapy and in combination with tislelizumab[2]

Collaboration & Support

- BeiGene leads Development, Manufacturing and Commercialization activities

[1]Equivalent to 10mg/kg of ipilimumab
[2]Tislelizumab is an anti-PD-1 antibody from BeiGene in late-stage development

BioAtla's Butterfly CAB Bispecific Platform



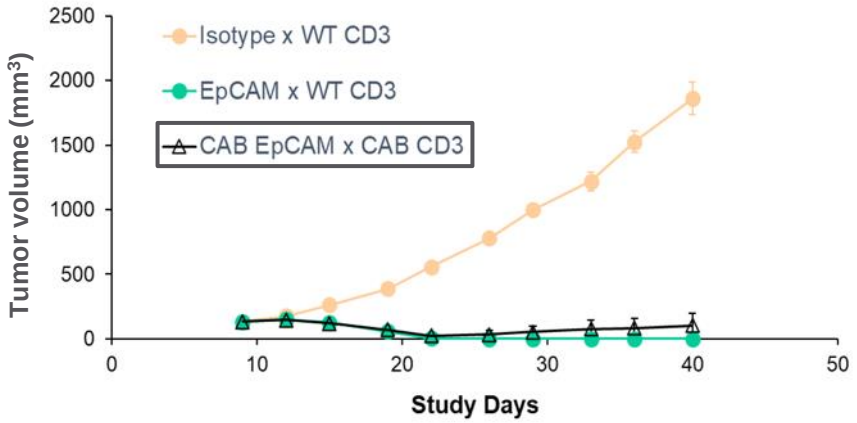
Higher safety, longer $T_{1/2}$, simple manufacturing

- **CABs have potential to reduce systemic activation for greater safety and efficacy**
- **Reduced cytokine release syndrome and neurological toxicity**
- **Enables T cell engaging therapies with high potency while limiting T cell exhaustion**
- **Four active bispecific programs (BA3182, BA3142, EGFR, Nectin-4)**

Note: *Optional CAB directed against the tumor associated antigen (TAA)

CAB-EpCAM x CAB-CD3 Bispecific Antibody Exhibits Comparable Antitumor Activity, While Maintaining Superior Safety Profile

CAB EpCAM x CAB CD3 bispecific demonstrates efficient tumor shrinkage

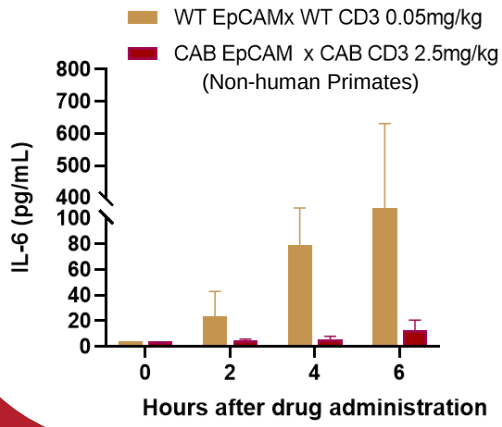


MiXeno Model with HCT116 = Colorectal Cancer Cell Line
1mg/kg twice/week in mice
(equivalent to 0.25mg/kg in non-human primates)

Summary

- **CAB-EpCAM x CAB-CD3 have comparable antitumor activity to wild type bispecific**
- **Low toxicity observed, characterized by:**
  - **Lower levels of IL-6**
  - **No report of diarrhea/duodenal damage at all dose tested**
  - **Minimal and transient ALT elevation only observed at highest dose tested (2.5mg/kg). No effect observed for AST and bilirubin.**
  - **No acute inflammatory changes in the liver, intestines and kidneys at any dose tested**
- **> 10x Higher Therapeutic Index**

CAB EpCAM exhibits lower IL-6 levels associated with severe cytokine-related toxicities

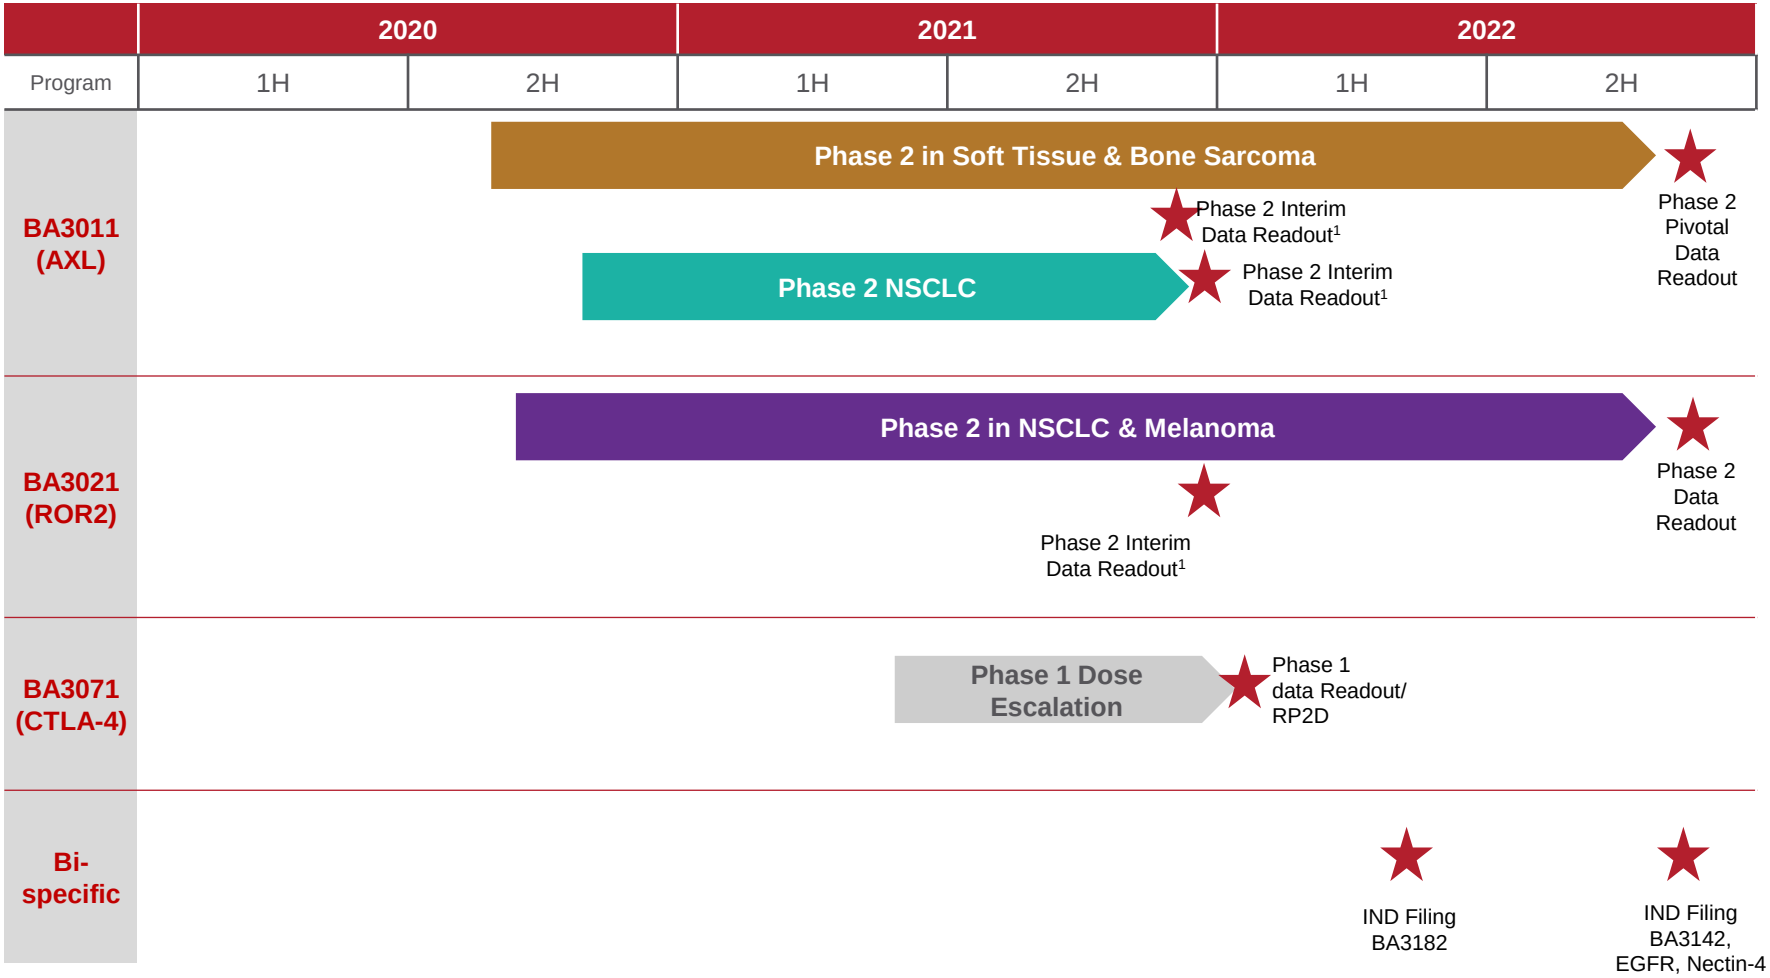


Bispecific Safety Results
(Non-GLP; Non-human Primates)

WT-EpCAM x WT-CD3	CAB-EpCAM x CAB-CD3
0.05 mg/kg = 2 expired	**0.25mg/kg** = 2 normal
***0.025mg/kg** = 2 ill	**1.0 mg/kg** = 2 normal
	2.5 mg/kg = 2 normal

WT = wild type; *from independent experiments

Upcoming Data Readouts and Inflection Points



Note: [1]Ovarian Investigator Initiated Trial not shown

End of Q1 2021 cash and cash equivalents on hand of $221 mm;
Sufficient capital to get through all listed inflection points and well into 2023

Summary and Conclusions

BioAtla is well positioned to develop a strong franchise of CAB-enabled treatments

Innovative CAB technology platform, with clinically-validated antibodies, that conditionally activate at optimal exposure levels, exhibit high potency, and possess ideal safety profiles

Multiple clinical assets demonstrating differentiated CAB technology and strong results for challenging targets, leading to novel therapeutics that can fulfil previously unmet patient needs, and resulting in a broad and diverse pipeline

Strong intellectual property foundation that provides worldwide coverage and multiple diversified patents for the CAB/PaCS™, CIAO™ technology platforms and for each product

Talented and experienced management team, with a strong track record and over 20 years of experience on average with leading biopharmaceutical companies

Strong financial position with $221.2 million as of Mar. 31, 2021 and the opportunity for additional future milestone payments providing funding well into 2023
